EUROPEAN DATA SPACE FOR CULTURAL HERITAGE

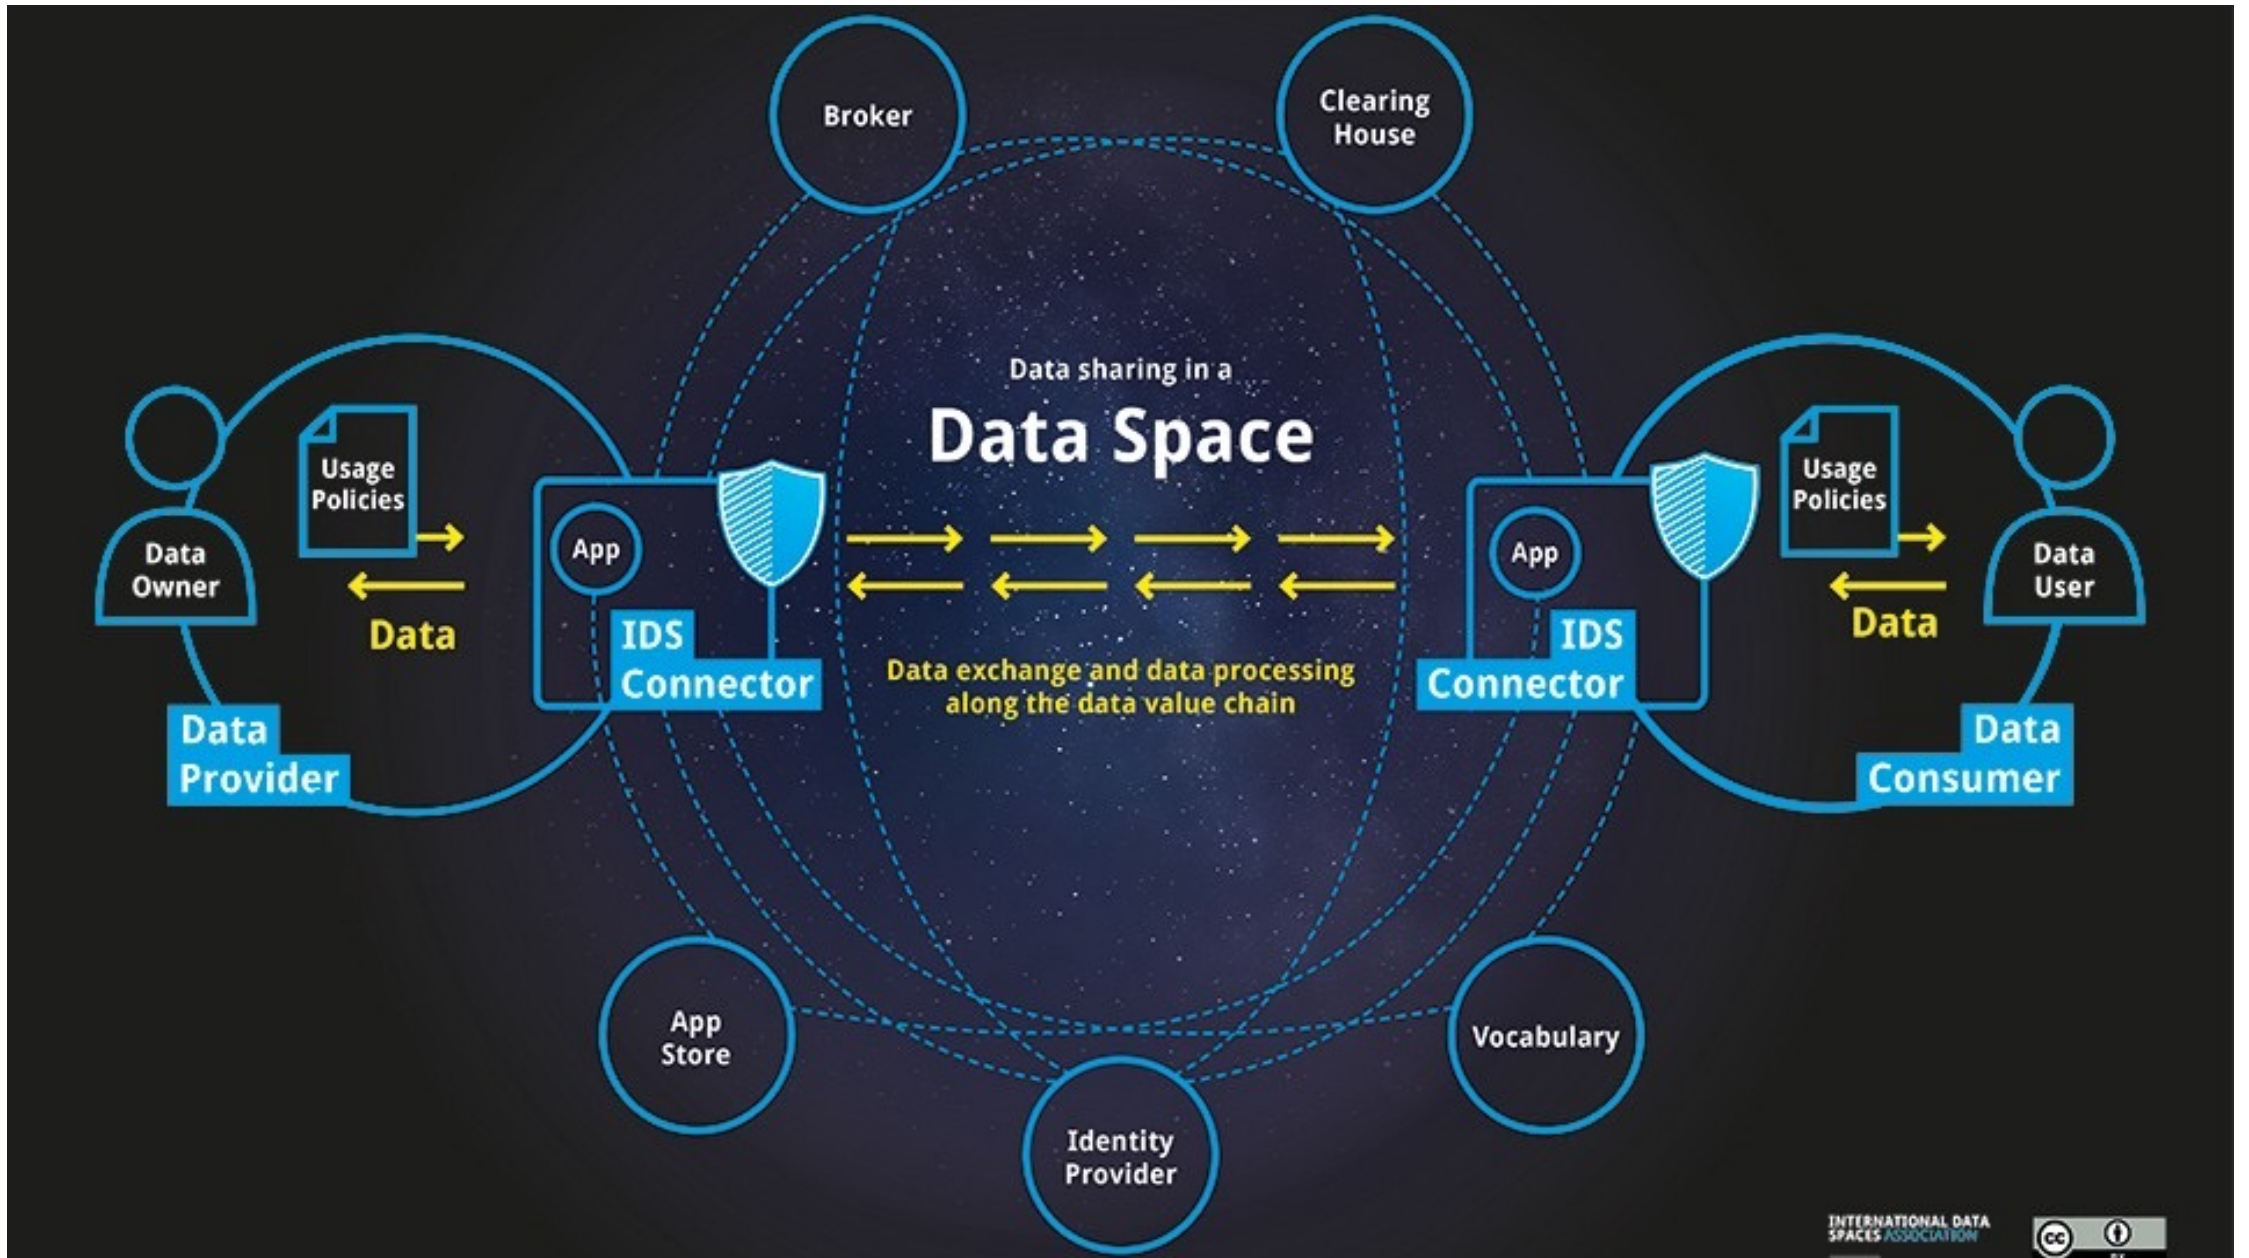

Milena Dobрева

Data spaces

Data spaces

- IDSA (International Data Spaces Association): “a domain-specific or cross-domain ecosystem of trusted partners that share data” in a sovereign way “ to benefit from the added-value potential in many different use cases.”
- Four maturity categories: ***lead-in, committed case, pilot and live.***

Paradox: on the IDSA data space radar, cultural heritage is **not** present yet.

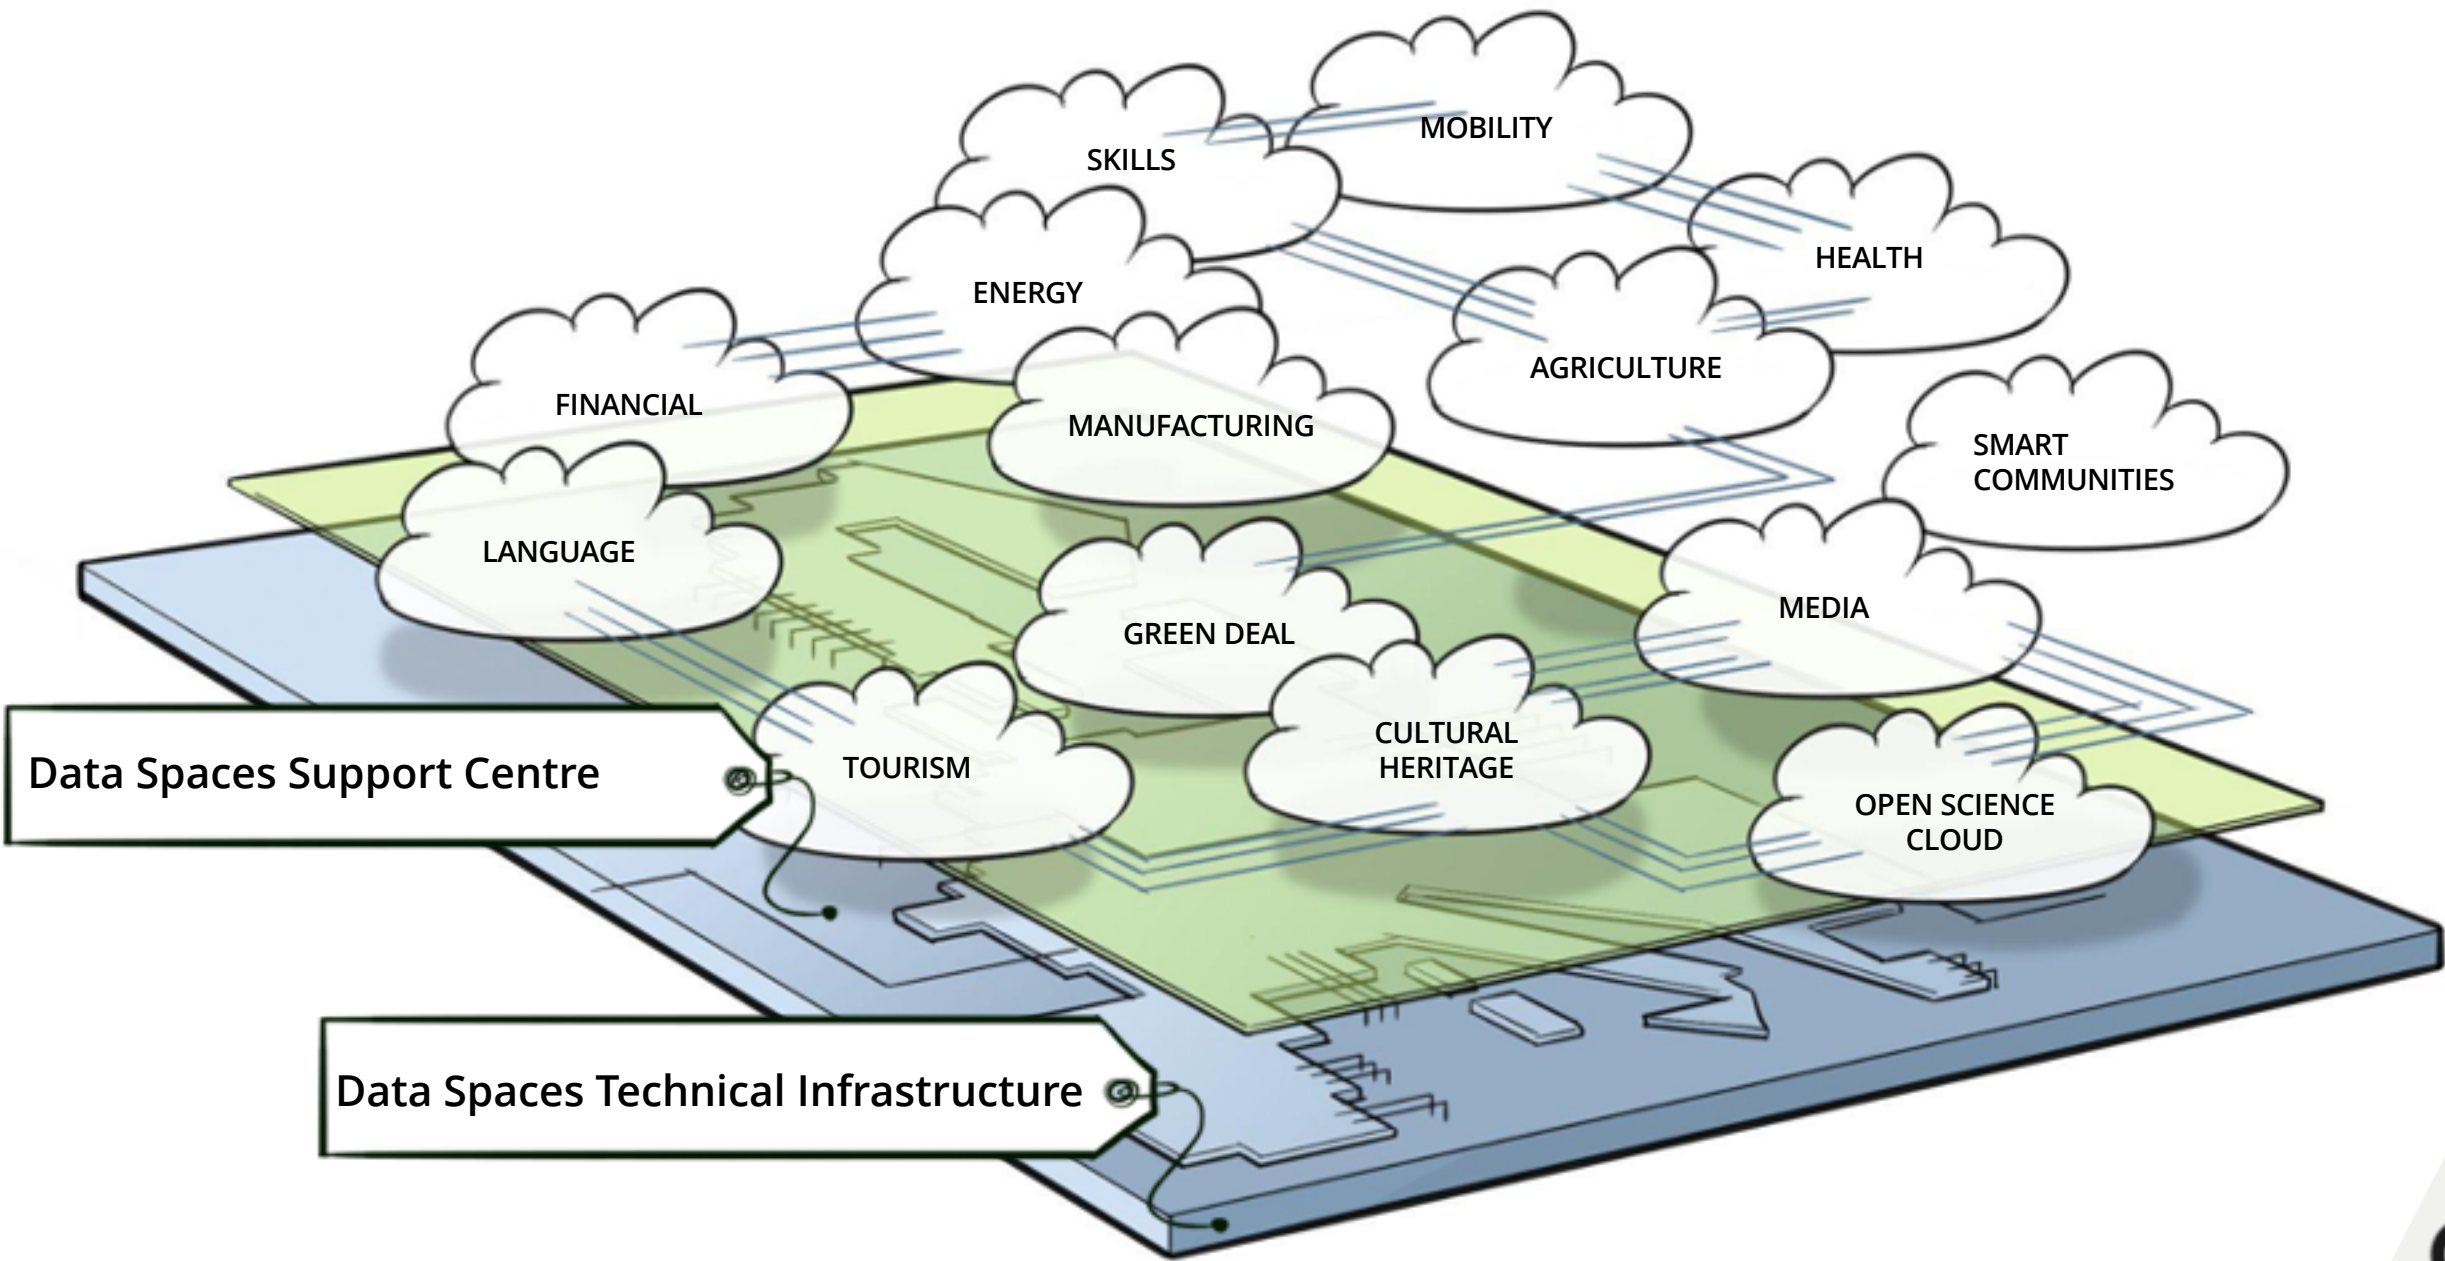

The EC invests some 2 billion EUR in data spaces; CH is considered mature due to the large-scale infrastructures in the domain.

The Common European Data Space for CH

- Its implementation had been launched in September 2022
- Tender – consortium led by Europeana
 - **58 mln objects**
 - **Considerable aggregation experience**
 - **Huge professional network – Europeana Network Association – seven communities**

Credit: this and two further slides, Europeana AGM slides (3 November 2022)

Minimal Viable Urban Data Space

Some key data space questions

- Technology
- Legal aspects
- Use cases
- Capacity building
- Convergence with other data spaces
- Connection to other infrastructures and networks

Our future plans: DISPATCHES – ERA Chair in Data Spaces for Cultural Heritage
