

EOSC Future Science Project: Dashboard for the State of the Environment

Angeliki Adamaki (ICOS)
Raul Bardaji Benach (EMSO)
Tjerk Krijger (MARIS)
ENVRI Cluster

EOSC Symposium – Prague 14-17 November, 2022

The EOSC Future project is co-funded by the
European Union Horizon Programme call
INFRAEOSC-03-2020, Grant Agreement 101017536

The Environmental Dashboard in a nutshell

Motivation

Information on the state of the environment
(for public, policy makers)

Switchboard to applications to explore data
and models (for scientists)

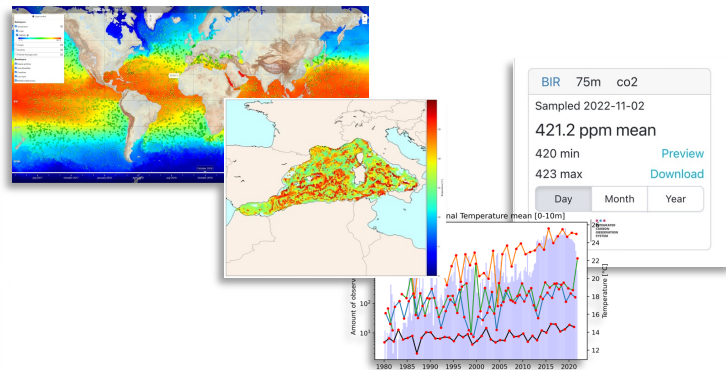

Understand the impacts of a changing climate
on biodiversity, environment and societies

Improved understanding of our universe

Easily understandable
environmental indicators

The Environmental Dashboard

EOSC as enabler

eoscfuture.eu

@EOSCFuture

EOSCfuture

The Environmental Dashboard

Impact

General Public – Offered a dissemination platform to showcase the usefulness of the scientific observations to Climate Change

Scientists - Get access to data and services from ENVRI

EOSC platform - used for integration of data and scientific workflows to support scientific products relevant to societal needs

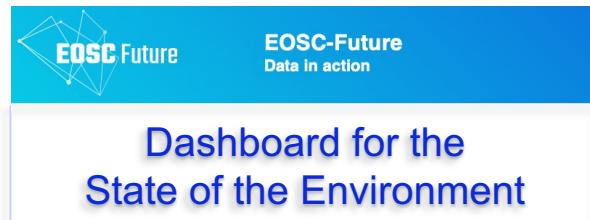

Engage scientists from research and industry, addressing environmental processes – as providers, co-creators, end-users

Strengthen the links with the ENVRI communities

Increase visibility of elaborated products provided by scientific communities

Results relevant to **the Sustainable Development Goals** of the UN and the **European Green Deal**

EOSCFuture

The Environmental Dashboard

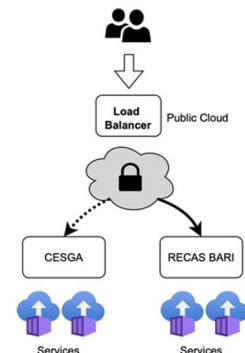

Technical requirements

- Implementation of the Dashboard
 - a. Back-end, with a RESTful API -> <https://env-dashboard.eoscfuture.eu:4000/docs>
 - b. Responsive front-end -> available [here](https://env-dashboard.eoscfuture.eu) (<https://env-dashboard.eoscfuture.eu>)
- Source code on git-based repository -> available [here](https://gitlab.emso.eu/eosc-future/) (<https://gitlab.emso.eu/eosc-future/>)
- Deployment and operations of the IT infrastructure using industry best practices and EOSC services
 - a. High-availability (redundancy for failover and business continuity)
 - b. Deployment of independent services via containers
 - c. EGI Cloud (<https://marketplace.eosc-portal.eu/services/egi-cloud-compute>)
 - d. EGI Check-in (<https://marketplace.eosc-portal.eu/services/egi-check-in>)

Integration with the EOSC

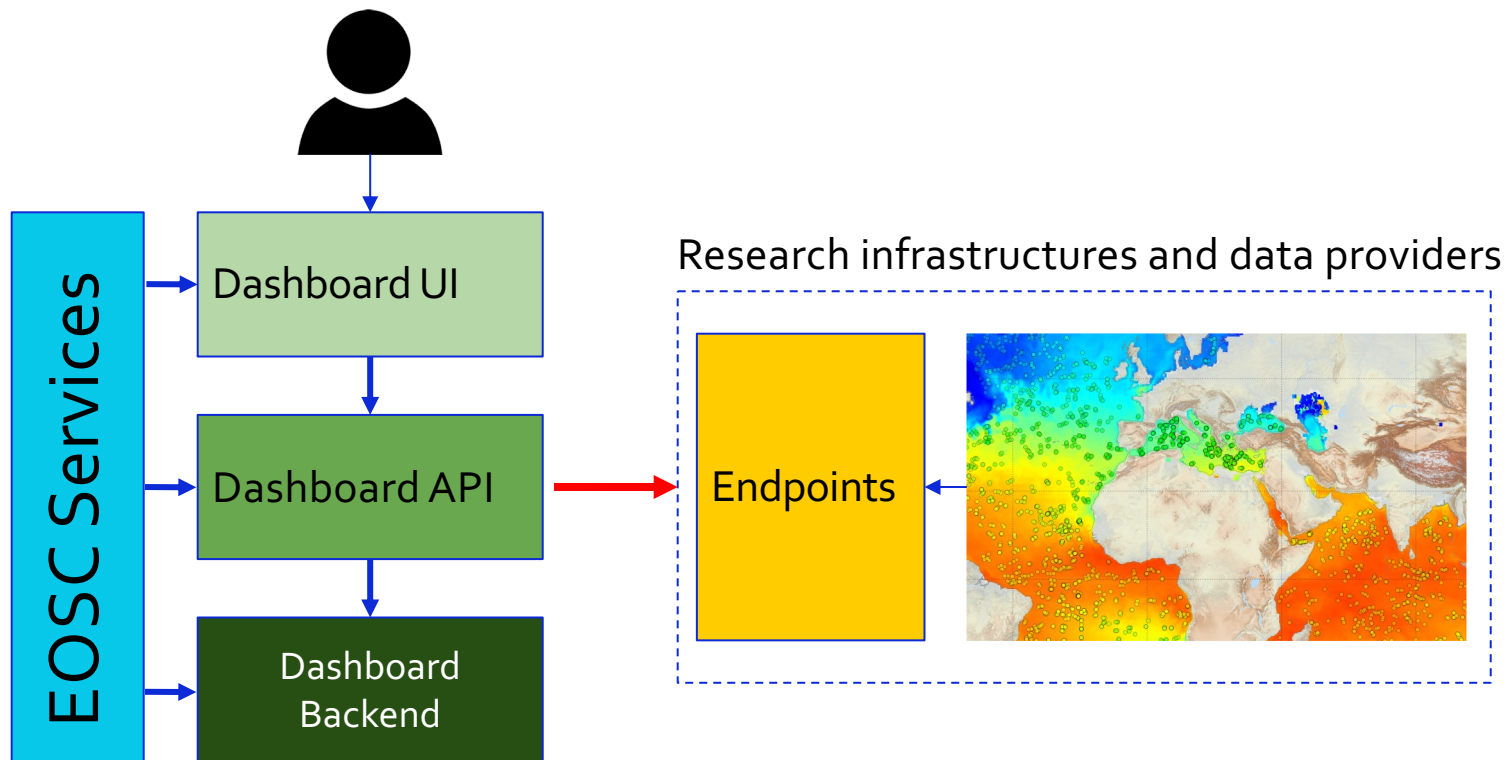

- ✓ Onboarding to EOSC Marketplace
- ✓ EOSC AAI Federation
- ✓ EGI Cloud Compute
- ✓ Service Monitoring
- ✓ Helpdesk

✓ Achieved
✓ In Progress

SeaDataNet

Global ocean mapping of in-situ measurements of Oxygen, Temperature, Nutrients and pH

Indicator Information About

DESCRIPTION

The ocean component consists of a Map Viewer that displays in-situ measurements of the Essential Ocean Variables (EOVs) Temperature, Oxygen, Nutrients and pH. These measurements are retrieved from the Blue Data Infrastructures (BDIs) Euro-Argo and SeaDataNet CDI using tailor-made APIs for fast sub-setting. The viewer includes a user interface designed for citizen scientists with the possibility to interact with the data by using sliders for time and depth. Background layers from CMEMS are used to compare the in-situ measurements with modelling and satellite products. The in-situ data available for different locations, depths and time periods are used to create scientifically justified aggregated values that feed the dynamic trend indicators at the 1st level of the dashboard, with some configuration options. For the ocean component, the environmental dashboard (level 1) hence includes a number of ocean trend indicators for the chosen EOVs, providing a trend in time for designated areas. While, users can then click on such an indicator guiding them to the Map Viewer (level 2) to browse deeper into the data and details facilitating the trends.

2. Upload the new YAML file

1. Download existing YAML file

The screenshot shows the ACTRIS web interface. At the top, there is a 'FRAME:' section with buttons for 'ADD', 'CREATE', and 'UPLOAD'. The 'UPLOAD' button is highlighted with a red box. Below this, there is a 'Jungfrauoch' section with a dropdown menu. The 'Jungfrauoch' section displays 'Jungfrauoch - equivalent black carbon (eBC)' and 'Sampled 2022-04-06 00:00:00'. Below this, there is a 'Preview' button and a 'Download' button. The 'Download' button is highlighted with a red box. A blue arrow points from the 'Download' button to the text '1. Download existing YAML file'. Another blue arrow points from the 'UPLOAD' button to the text '2. Upload the new YAML file'.

YAML FILE

```
# Mandatory fields

## A title to describe the frame.
title: Example of frame
## Name of the organization that provides the information of the frame
data_provider_name: Name of the data provider
## Abbreviation of the provider name
data_provider_abbreviation: NDP
## Logo of the provider
data_provider_logo: URL to the logo (in https)
## Web site to redirect when users click on the logo
data_provider_url: URL to the web site
## provide the URL to access an HTML webpage which content is going to be
## displayed
parameters:
  -
    name: Name of the parameter
    value: URL to the webpage or endpoint

# Optional fields
## Researchers, developers and technical staff involved
authors:
  -
    name: Name of the author
    surname: Surname of the author
    email: Email of the author
```
